PROFESSIONAL SUMMARY

Computer Science undergraduate (8th semester) skilled in developing **AI-based** and web solutions using Python, C++, and SQL. Experienced in applying machine learning and computer vision to real-world problems through academic projects. Passionate about building efficient, user-focused applications and eager to contribute to innovative software development teams.

ACADEMIC BACKGROUND

- **Bachelor of Science in Computer Science (BSCS)**
Comsats University Islamabad, Wah Campus
Expected Graduation: 2027
CGPA: 3.66 / 4.00

TECHNICAL SKILLS

- **Programming Languages:** Python, C++, SQL
- **Web and App Technologies:** HTML, CSS, Dart
- **AI and ML Tools:** TensorFlow, Scikit-learn, LangChain, OpenCV
- **Concepts:** Machine Learning, Computer Vision, Fuzzy Logic, Data Structures & Algorithms
- **Tools:** Visual Studio Code, Jupyter Notebook, Google Colab, GitHub

PROJECTS

Cab Management System (C++)

- Built a cab management system using Queue and Binary Search Tree (BST) data structures for efficient ride and customer management.

Employee Focus Detection System (Python, OpenCV)

- Built a webcam-based monitoring system to detect employee attention and focus levels using computer vision techniques.

Accident Detection Website (Python, CNN, Node.js)

- Built a real time computer vision-based accident detection system using a custom Convolutional Neural Network (CNN) model and web integration.

Carpool System Website (React, TypeScript, Tailwind CSS, Node.js, Express.js, Prisma)

- Design a web-based carpool management platform as part of the Design and Analysis of Algorithms course project.

E-commerce Product Return Prediction (Python, Random Forest, Scikit-learn)

- Developed a machine learning model to analyze customer data and predict product return probability using Random Forest algorithms.

StudyMate Career Recommendation System (Web Application, LLM, LangChain)

- Developed an AI-powered career recommendation website that suggests suitable career paths based on user input.
- Integrated Large Language Models (**LLMs**) to generate personalized career roadmaps for users.
- Utilized **LangChain** to manage and structure LLM-based workflows for response generation and roadmap creation.

LANGUAGES

- English (Conversational)
- Urdu (Fluent)
